
Education

- 2024 **Ph.D. in Computer Science**, *Washington University in St. Louis*, St. Louis, MO.
Advisor: Dr. Alvitta Ottley
Dissertation Title: Towards Building a Reliable Human-Machine Partnership – A Visual Analytics Approach
- 2023 **M.S. in Computer Science**, *Washington University in St. Louis*, St. Louis, MO.
- 2019 **B.A. in Computer Science**, *New College of Florida*, Sarasota, FL.

Technical Experience

- Jun. 2024 – Present **Lead Research Scientist (Visual Analytics & UX)**, *Epsilon*, Chicago, IL.
- Designed and launched an AI-powered analytics interface that enables users to generate, summarize, and structure insights through natural language interactions and intelligent recommendations.
 - Integrated conversational AI into data workflows, allowing users to intuitively explore data, refine visualizations, and build narrative reports with reduced manual effort.
 - Developed a recommendation system for data views, driving a 32% increase in user-generated insights and improving engagement among new users by 44%.
 - Delivered user experience improvements that simplified complex workflows and enhanced clarity and navigation in a web-based analytics platform.
 - Mentor for summer intern project on user session modeling and the design of a visual analytics dashboard to support monitoring usage patterns, system behavior, and error states

Research Experience

- Aug. 2019 – May 2024 **Graduate Research Assistant**, *Washington University in St. Louis*, St. Louis, MO.
Visual Interface and Behavior Exploration (VIBE) Lab
- Conducted research on interactive visual analytics systems that combine user interaction signals with machine learning to support real-time data exploration
 - Investigated trust, bias, and transparency in AI-guided visual interfaces, with findings recognized at EuroVis 2024
- Jun. 2018 – Aug. 2018 **Data Visualization Research Intern**, *Washington University in St. Louis*, St. Louis, MO.
Big Data Analytics REU Program
- Designed and developed an interactive data visualization dashboard using D3.js to communicate optimized smart-home energy schedules for devices
 - Transformed complex system outputs (device constraints, energy cost, and consumption data) into clear, interpretable visual encodings
 - Created direct manipulation interactions within the dashboard allowing users to edit schedules and immediately see changes in hourly energy cost and usage

Technical Skills

Languages: Python, TypeScript, JavaScript, HTML, CSS, R, Java

Visualization & UI: D3.js, React, Plotly

Data & Machine Learning: NumPy, Pandas, Scikit-Learn

Backend & Systems: Node.js, Flask, PostgreSQL

Tools: Git

Honors & Awards

- 2024 **Honorable Mention** for "Guided By AI: Navigating Trust, Bias, and Data Exploration in AI-Guided Visual Analytics" at EuroVis 2024 (Odense, Denmark)
- 2019 **Dean's Select Fellowship**, *Washington University in St. Louis*
